it around.

me tab and apply  
ngs in your

```
create macro mysecond_142841 (abc integer)as(update emp_142841 set salary=salary*1.1 where  
deptno=:abc;  
select * from emp_142841 where deptno=:abc);
```

RDS

A screenshot of a Microsoft Word document window. The ribbon at the top shows the 'Normal' style selected. The 'Font' section indicates 'Calibri (Body) 11'. The 'Paragraph' section includes a list icon. The 'Styles' section shows 'Normal' highlighted. The 'Editing' tab is selected. The main content area contains a SQL procedure:

```
create procedure insertsalary_142841
(
    in_in_employeeeno integer, in_in_gross float,
    in_in_deduction float,in_in_netpay float
)
begin
    insert into salary_142841 values (
        :in_employeeeno,
        :in_gross,
        :in_deduction,
        :in_netpay
    );
end;
```

The status bar at the bottom shows '7 OF 7 358 WORDS' and a zoom level of '98%'. A watermark in the background says 'An interactive outline of your content.'
